

ContraXcentral™ Contract Management component enables trading and marketing staff to capture deals and trades efficiently through user configurable interfaces and blotters. User-defined work flows can be set-up to streamline processes for trade capture, approvals and confirmations.

ContraXcentral™ Contract Management supports physical and financial trades as well as internal transactions for inter-book and inter-company trades. It is able to generate all trade details such as third party trading particulars, volume/quantity specifications, locations, pricing algorithms, product quality, duration and associated fees such as brokerage charges, transport charges, management fees, demand charges, and comments related to execution as well as special operational, pricing and invoicing requirements. **ContraXcentral™ Contract Management** supports management controls and limits including credit, volumetric, VaR, MtM, option greeks, book and trading limits. The intelligent **ContraXcentral™ Contract Management** triggers alerts and actions can be triggered before these preset limits are exceeded.

ContraXcentral™ Contract Management also serves as a repository for all trade and position information. Throughout the entire contract lifecycle, **ContraXcentral™ Contract Management** provides instant visibility to critical information such as: events that trigger favorable or unfavorable contract terms, contractual exposure, credit limits, and contract renewal and extension dates. The system features full support for multiple commodities including but not limited to edible oil, grains, softs, energy and metals.
