

**ContraXcentral™ Inventory Management** is designed to efficiently manage the flow of commodities, effectively utilize resources and communicate with counterparties.

**ContraXcentral™ Inventory Management** provides optimization by providing a balance of supply and demand at a minimum total cost as well as between inventory level and workload to meet counterparty requirements in the supply chain.

**ContraXcentral™ Inventory Management** automates the Inventory activities for a multi-company, multi-location environment. Different storage types like warehouses, storage tanks can be defined in **ContraXcentral™ Inventory Management**. Storage rules can also be configured to address specific requirements. The user has the freedom to regulate storage of products through warehouse allocation and control various activities like **Issues, Receipts, Returns, Adjustments, Inter warehouse movements etc.** Provision to take a host of reports on a daily or periodic basis is also available. Physical Inventory and Cycle Counting ensures accuracy of inventory data. Various UOMs can be defined in the system. UOM conversion rules based on product or temperature can also be defined. Lot tracking can be done in **ContraXcentral™ Inventory Management**.
